

FlexTT5-Canon

The FlexTT5's simple design comes to life through its hot-shoe connection with a camera or flash. Mount a flash or command unit on the FlexTT5 to use the same zone controls and ratio commands as you would normally. The system tracks your changes in ISO, shutter speed and aperture and reacts accordingly to make sure exposures stay right on target. Use the flash compensation dial on your camera or flash just as you would normally and the changes pass seamlessly through the system.
